EDUCATION

International Institute of Information Technology (IIIT), Bhubaneswar

B.Tech - Computer Science and Engineering - **CGPA 8.21**

2021 – 2025

Bhubaneswar, Odisha

COURSEWORK / SKILLS

- DSA
- DBMS
- Operating Systems
- Machine Learning
- OOP Concepts
- Computer Networks

EXPERIENCE

Incture Technologies

August 2025 – Present

Role – Associate Software Engineer

Bhubaneswar

- Contributed in developing a **Sales and Order Automation** workflow that automatically processes Sales Orders received via email and creates corresponding Sales Orders in **SAP ECC and S4**, eliminating manual processing and reducing order creation time by **69%**.
- Designed and implemented a **dynamic scheduler framework** to automate PO detection from receiver emails, ERP sync-up processes, and document cleanup. The framework detects database configuration changes, stops affected schedulers, and restarts them using the updated configuration.
- Optimized **CMIS interactions** with the SAP document management system by reusing existing sessions instead of creating new ones, reducing document processing time by **38%** as verified through application logs.
- Worked extensively with **SAP BTP Cockpit and Destinations**, integrating and consuming multiple configured destinations to establish communication between the application, SAP ERP systems, and supporting services.
- Developed a **dynamic reporting module** that allows users to select required metrics and reporting parameters, generates customized **PDF reports**, and automatically delivers them to configured email addresses at user-defined schedules.

PROJECTS

SyncFlow  | Java, Spring Boot, PostgreSQL, React, Gmail API, Google Pub/Sub, Groq, Docker 2026

- Built an AI-powered email automation platform that turns incoming Gmail messages into tasks and meetings, using **Gmail OAuth 2.0**, **Google Pub/Sub**, and **History API-based incremental sync (historyId)** to process only relevant mailbox changes.
- Built a database-backed **asynchronous job processing system** with background workers, safe concurrent job claiming, retries with backoff, and failure handling, plus **idempotent processing** keyed on Gmail message IDs.
- Integrated **Groq LLMs** to classify emails and extract title, sender, due date, and description, correctly labeling **task, meeting, or neither in 87% of cases** on a hand-labeled set of **100 emails**.
- Processed **100 emails** in a single batch in approximately **2.5 minutes**, with an average **6-second end-to-end processing time per email**, measured from email receipt to database task creation.

Animax  | JavaScript, React, Node.js, Express, MongoDB, Firebase, JWT, Material-UI 2024 – 2025

- Built a full-stack **video streaming platform** with **React, Node.js, Express, and MongoDB**, where creators upload and manage their own content and viewers can watch in fullscreen or download.
- Implemented **JWT-based authentication** with OTP verification, OAuth2 login, and password reset.
- Built video uploads on **Firebase Cloud Storage**, along with search, filtering, favorites, and light/dark themes.

TECHNICAL SKILLS

Programming Languages: Java, C++, JavaScript, Python, C

Frontend: JavaScript, HTML5, CSS3, React, Next.js, Material-UI, Tailwind CSS, Bootstrap

Backend: Spring, Spring Boot, Spring Security, Node.js, Express, WebSocket, REST APIs, Microservices, JWT, OAuth

Database: MySQL, PostgreSQL, MongoDB, Hibernate/JPA, Spring JDBC, Flyway

Cloud & Tools: Docker, Google Pub/Sub, Git, Postman, Maven

CODING PLATFORMS

- Solved **470+** Problems on **Leetcode**. 
- Solved **220+** Problems on **GeeksforGeeks**. 
- Leetcode Rating(After 5 contests) **1551**
